

FC-50Vet

Color Doppler Ultrasound Scan System

Quality-Reliability-Innovation

An Excellent Portable Color Doppler Machine

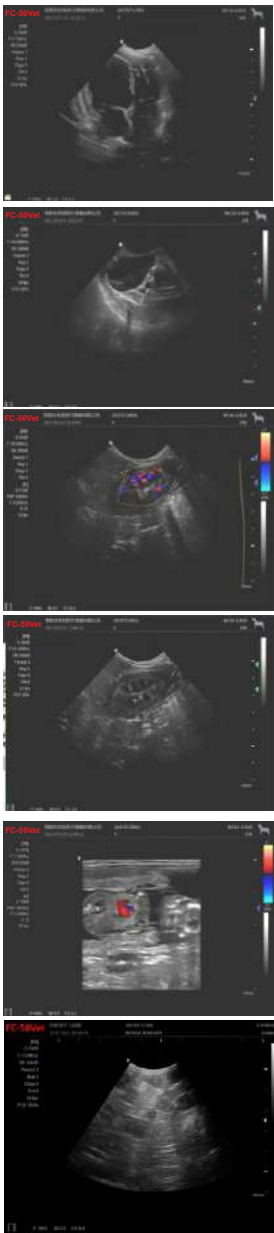

FC-50Vet is an excellent general purpose color Doppler ultrasound diagnostic system. The 50Vet offers decent 2D images with THI, excellent CFM images, as well as Doppler imaging modes such as CFM, PW, PDI, etc. Extensive clinical application, high efficiency full digital image management system, more convenient image storage and reading, flexible configuration, ergonomic design, improved use range.

Characteristic

- 15.0" LCD high definition Display;
- All digital color Doppler ultrasound host;
- 160GB SSD for permanent storage;
- Min. 300-frames of Cine Loop;
- Measurement & calculation software packages;
- Optional 3D Software.

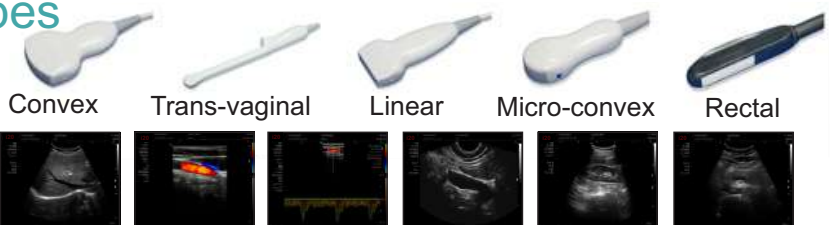

Specification

Main Parameter	15" tilt-and-swivel HD LED monitor
	Scanning mode: Convex, Trans-vaginal, high-frequency linear array, Micro-convex; 4D array;
	Modes: B, B/B, B/M, CFM, CFM/B, PDI, PDI/B, PW.
	B/D dual-purpose: linear array: B/PWD; convex array: B/PWD;
	Support the five languages.
	Gray scale: 256 levels.
	Depth display: ≥250mm;
	Dynamic range: 0~120dB adjustable.
	One-click optimization function.
	Self-motion optimize function.
	Image multiplying factor.
	Image mode: digital beam forming, tissue harmonic imaging.
	picture in picture zoom in and zoom part function.
Image storage, video storage, cine loop, disk storage capacity ≥160G;	
Frequency conversion: 2MHz-12MHz (Depending on the probe)	
16 kinds of pseudo color encoding can optional.	
E-zoom: magnify 2 times of real time image.	
Focus position: dynamic electron focusing.	
Application	Pigs, dogs, cows, cats, sheep, horses, cattle
Output Interface	USB, VIDEO, DICOM, FOOT SW. USB Port: Our machine can connect the common printer. Used to print the measurement report page.

Optional Probes
